SKILLS

Backend: Python, C#, SQL, TypeScript, Node.js, REST APIs

Data: Databricks, dbt, SQL Server, PostgreSQL, MySQL, ETL

Web: React, Next.js, Tailwind CSS, Payload CMS

Integration: NetSuite, Boomi, EDI / SFTP, Webhooks

Tooling: Docker, Git, GitHub Actions, Vercel, AWS S3

EXPERIENCE

Value Windows & Doors Duarte, CA

Full-Stack Engineer (Backend & Data) *01/2024 – Present*

- Helped design a cloud data platform on Databricks + dbt and built part of it: raw ERP data moves through medallion layers (Bronze→Silver→Gold→Mart) into models for manufacturing, inventory, sales and workforce reporting.
- Wrote data-migration and integration pipelines in C# and Python that improved ERP reliability; they process tens of thousands of records a day across departments.
- Built Power BI dashboards for executives and internal portals in React, so teams can look up real-time operational metrics themselves.

APEXUS-TECH New Brunswick, NJ

Software Engineer Intern *07/2022 – 01/2024*

- Built a data-visualization tool that made quantitative strategy analysis simpler for the operations desk, so decisions came faster.
- Wrote Python + MySQL backend services that pulled in and stored financial-market data automatically, so analyses stayed up to date.
- Designed ETL pipelines that lifted batch-processing efficiency by 40%, and built internal monitoring dashboards with the product team.

Northeastern University Boston, MA

Data Warehousing & SQL Tutor *03/2023 – 07/2023*

- Tutored students in the graduate data warehousing and SQL course (ALY6030) on SQL performance tuning, indexing strategies and reading execution plans.

PROJECTS

DataHub *C#, .NET, ASP.NET Core* 2026

- An internal data hub rewritten in C#/.NET: an older system split across three services became one ASP.NET Core application, in production since June 2026.
- Before cutover, a reconciliation tool diffed every endpoint between the old and new systems; releases ship only from version tags, and a failed post-deploy smoke test rolls back automatically.

B2B Customer Portal *NetSuite, reverse proxy, CI* 2026

- A customer portal backed by NetSuite, deployed to a company server in September 2026 and in internal use.
- Every ERP write is a dry run first and is keyed by the portal's own order number, so a retried order is never sent twice.

jackdeng.cc *Next.js, Payload CMS, PostgreSQL, Vercel* 2026

- This personal site: Next.js 16 and Payload CMS 3 in one app on Supabase Postgres, deployed to Vercel, in English and Chinese.
- CI compares the schema the migrations build with the one the code defines, then seeds, builds and smoke-tests every pull request; the database is backed up nightly, encrypted.

EDUCATION

Trine University | M.S. Engineering Management (in progress) 07/2026 – Present

Northeastern University | M.S. Analytics · GPA 3.93/4.0 03/2022 – 07/2023

University of Sussex (UK) | M.S. AI & Adaptive Systems 10/2020 – 02/2022

Ningbo Tech University (China) | B.E. Computer Science 09/2016 – 06/2020
