SKILLS

Backend: Python, C#, SQL, TypeScript, Node.js, REST APIs

Data: Databricks, dbt, SQL Server, PostgreSQL, MySQL, ETL

Web: React, Next.js, Tailwind CSS, Payload CMS

Integration: NetSuite, Boomi, EDI / SFTP, Webhooks

Tooling: Docker, Git, GitHub Actions, Vercel, AWS S3

EXPERIENCE

Value Windows & Doors Duarte, CA

Full-Stack Engineer (Backend & Data) *01/2024 – Present*

- Built and run three internal .NET 10 apps on the company ERP: a data hub that replaced three older services, a B2B ordering portal, and a read-only order tracking portal for customers.
- Helped design a cloud data platform on Databricks + dbt and built part of it: raw ERP data moves through medallion layers (Bronze→Silver→Gold→Mart) into models for manufacturing, inventory, sales and workforce reporting.
- Wrote C#/Python migration and integration pipelines that made the ERP more reliable at tens of thousands of records/day.
- Built Power BI dashboards for executives, so teams can look up real-time operational metrics themselves.

APEXUS-TECH New Brunswick, NJ

Software Engineer Intern *07/2022 – 01/2024*

- Built a data-visualization tool that made quantitative strategy analysis simpler for the operations desk, so decisions came faster.
- Wrote Python + MySQL backend services that pulled in and stored financial-market data automatically, so analyses stayed up to date.
- Designed ETL pipelines that lifted batch-processing efficiency by 40%, and built internal monitoring dashboards with the product team.

Northeastern University Boston, MA

Data Warehousing & SQL Tutor *03/2023 – 07/2023*

- Tutored students in the graduate data warehousing and SQL course (ALY6030) on SQL performance tuning, indexing strategies and reading execution plans.

PROJECTS

DataHub *C#, .NET 10, ASP.NET Core, Hangfire, Vue 3* 2026

- Consolidated a 3-service legacy integration platform into one ASP.NET Core app with 345 API endpoints, cut over only after an automated reconciliation harness diffed every endpoint; 130+ releases in under 6 weeks.
- Built a fail-closed supplier EDI exchange over SFTP: gates on all 9 export paths, an archive made append-only at 3 layers, alerts within 30 min of a missed pickup; tests grew from about 2,200 to 5,100+.

B2B Customer Portal *C#, .NET 10, EF Core, React 19, ERP integration* 2026

- Built a B2B ordering portal on the company ERP with real-time stock and quote-to-order; 60+ releases in a month.
- Idempotent, dry-run-first ERP writes keyed by the portal's order number; 1,800+ tests (1,411 .NET, 393 client).

Order Tracking Portal *C#, .NET 10, Vue 3, Playwright* 2026

- Read-only portal for B2B customers' orders, per-unit production status and invoices; 32 releases in its first 2 weeks.
- CI blocks internal system names in customer-facing code; 424 backend tests; 47 UI components spun out as a shared kit.

jackdeng.cc *Next.js, Payload CMS, PostgreSQL, Vercel* 2026

- Next.js 16 + Payload CMS 3, bilingual; 138 merged PRs; CI now runs 425 tests, a schema-drift check and a smoke test.

EDUCATION

Trine University | M.S. Engineering Management (in progress) 07/2026 – Present

Northeastern University | M.S. Analytics · GPA 3.93/4.0 03/2022 – 07/2023

University of Sussex (UK) | M.S. AI & Adaptive Systems 10/2020 – 02/2022

Ningbo Tech University (China) | B.E. Computer Science 09/2016 – 06/2020
